NAVIGATION #f5f5f3 Nav background — cream, 80px fixed bar #2a2118 Nav link text	ACCENTS & CONTROLS #915a4a Terracotta — eyebrow labels (same as website) #d4bfb2 Sandy — CTA buttons (same as website)
FOOTER	HERO / PAGE OVERLAYS rgba(15,12,10, 0.08–0.65) Page hero gradient overlay — bottom to top, dark to transparent

#2a2118 Footer background	
#ffffff Footer text on dark	
	FOOTER (SHARED) #2a2118 Footer background — same across both themes

ANALYSIS Where the themes differ — and where they can be pushed further		
CURRENTLY THE SAME IN BOTH Cream backgrounds, text colours, terracotta eyebrows, sandy buttons, and the dark footer are identical across both themes. This gives coherence but reduces the sense of a distinct editorial identity. #f5f5f3 #915a4a #d4bfb2 #2a2118	GDS-ONLY COLOUR Sage #dddcc8 is the one colour unique to the editorial — used for metadata bars, pullquotes, and the GDS index hero. This is the clearest signal of a separate identity, but it currently appears muted alongside the website palette. #dddcc8	SUGGESTED LEVERS TO PULL To sharpen the GDS identity without rebuilding: change the GDS eyebrow colour away from terracotta; replace sandy buttons with a tone that reads more editorial (cooler sage, slate, or ink); darken the sage background for more contrast. The website stays warm; GDS goes cooler and more considered. suggestion suggestion suggestion
